

# Rejuvenate & Renew Your Skin with our Glymed Chemical Peels

## WHAT CAN A CHEMICAL PEEL DO?

- Lighten unwanted pigment and even out skin tone
- Diminish fine lines and wrinkles
- Brighten and smooth out rough skin
- Increase collagen and elastin
- Lighten acne blemishes and prevent future breakouts

Our Glymed chemical peels promote skin rejuvenation by exfoliating the outermost layer of dead skin cells, revealing a fresh, glowing complexion underneath. These peels can improve the overall texture and tone of the skin as well as stimulate collagen production, which helps reduce the appearance of fine lines and wrinkles. Peels can effectively treat acne by unclogging pores, reducing oil production, decrease inflammation, and can fade acne scars and improve the overall clarity of the skin. Hyperpigmentation correction, including dark spots, age spots, and melasma, can be improved with chemical peels by targeting the excess melanin in the skin, helping to even out skin tone and reduce discoloration and help minimize the appearance of large pores by removing trapped oil and debris. This can lead to a smoother and more refined complexion.
